### § 64.13

(f) To withstand dynamic loading conditions applied simultaneously.

[CGD 84-043, 55 FR 37410, Sept. 11, 1990; 55 FR 40755, Oct. 4, 1990]

### § 64.13 Allowable stress; tank.

- (a) The calculated stress in the tank under design conditions, including dynamic loading conditions applied simultaneously, must not exceed the allowable stress listed in Division 1 of section VIII of the ASME Code, for a design temperature of 122 °F.
- (b) The calculated stress in the tank at test pressure must not exceed 75 percent of the minimum yield stress, 1 or 37.5 percent of the minimum tensile stress 1 of the material, whichever is less

[CGD 73–172, 39 FR 22950, June 25, 1974, as amended by CGD 84–043, 55 FR 37410, Sept. 11, 1990]

### § 64.15 Allowable stress; framework.

The calculated stress for the framework must be 80 percent or less of the minimum yield stress of the framework material under the dynamic loading conditions that are applied simultaneously.

## § 64.17 Minimum tank thickness.

- (a) Except as allowed in paragraph (b) of this section, a tank with a diameter of—
- (1) 6 feet or less must have a shell and head of  $\frac{3}{16}$  inch thickness or more; or
- (2) More than 6 feet must have a shell and head of ½ inch thickness or more.
- (b) If the tank has additional framework to guard against accidental puncturing of the tank, the shell and head thickness must be 1/8 inch or more.

### § 64.19 External pressure.

- (a) A tank without a vacuum breaker must be designed to withstand an external pressure of  $7\frac{1}{2}$  psig or more.
- (b) A tank with a vacuum breaker must be designed to withstand an external pressure of 3 psig or more.

### §64.21 Material.

The material for a tank must meet the requirements in Division 1 of section VIII of the ASME Code.

[CGD 73–172, 39 FR 22950, June 25, 1974, as amended by CGD 84–043, 55 FR 37410, Sept. 11, 1990]

## §64.23 Gasket and lining.

Each gasket and lining must be made of material that is—

- (a) Chemically compatible with the product for which the tank is approved;
  and
- (b) Resistant to deterioration from the product for which the tank is approved.

### § 64.25 Cross section.

- A tank must have a cross section design that is—
  - (a) Circular; or
- (b) Other than circular and stress analyzed experimentally by the method contained in UG-101 of the ASME Code.

[CGD 73-172, 39 FR 22950, June 25, 1974, as amended by CGD 84-043, 55 FR 37410, Sept. 11, 1990]

## § 64.27 Base.

The base of an MPT must be as wide and as long as the tank.

## § 64.29 Tank saddles.

If a tank is not completely supported by a framework, it must be supported by two or more external saddles, each of which extends to 120 degrees or more of the shell circumference.

### §64.31 Inspection opening.

An MPT must have an inspection opening that is designed in accordance with Division 1 of section VIII of the ASME Code.

[CGD 73-172, 39 FR 22950, June 25, 1974, as amended by CGD 84-043, 55 FR 37410, Sept. 11, 1990)

# § 64.33 Pipe connection.

Each pipe connection that is not a pressure relief device must be fitted with a manually operated stop valve or closure located as close to the tank as practicable.

 $<sup>^{1}</sup>$ Listed in Division 1 of section VIII of the ASME Code.
